BASIC INFORMATION

It is essential to work to the stated tension. This is especially important as some patterns can be followed using different yarns though of all the same tension, a tension square should be knitted before starting. A tension square should take an evening and ensures that the correct size is knitted resulting in a successful handknit.

If you have too many stitches to your 10cm/4in square, your tension is tight and you should change to a larger needle. If there are too few stitches, your tension is loose and you should change to a smaller needle.

Work all directions inside square brackets the number of times stated.
